Emotions Buddy

Stuffed toy that helps children to identify emotions, the first step to being able to understand, express and verbalize them. Ideal for working on emotions from a young age and teaching children to express them, to feel heard and to develop self-esteem. The light module enriches the gaming experience by allowing a color to be associated with an emotion.

Content: 9 Velcro-backed pieces of felt with interchangeable facial features and 1 removable heart-shaped light module.

Monster Telling

Soft multi-sensory book with pictures and movable elements designed to help to promote good habits between children. It includes three story tales that cover in a fun and stimulating way three milestones in a child's development, such as potty training, learning to sleep alone or washing their hands through good hygiene habits.

CPQ: 6 units  27,3 cm

The learning experience can be enhanced with the Miniland grow&fun app, with which children can listen to the stories in English or Spanish or even record them with the teacher's voice. In the classroom, they will also be able to listen to the tale in a group and practice reading, together with the physical toy.

Amazing Inside

Monster-shaped stuffed toy for children to learn to understand their body in a fun way. The game consists of taking out 7 soft and attractively colored cuddly organs through the monster's mouth and putting them back in their correct place on the outside of the monster. A first approach to the natural sciences. You can work in the classroom individually or in small groups.

Content: monster stuffed toy, 7 soft cuddly organs with Velcro and 6 activity cards compatible with Miniland grow&fun app.

CPQ: 6 units 42 cm

The game experience can be extended thanks to the QR cards to be used with the Miniland grow&fun app, where you can see the real organs in augmented reality, listen to the sounds they make and learn much more about each one of them.

singing buddy 75002

A LITTLE MONSTER WITH THERAPEUTIC MELODIES TO HELP BABIES FALL ASLEEP

- | | | | |
|--|-------------------------------------|--|-----------------------------------|
| | Record songs and stories | | 100% organic cotton surface |
| | Reproduce the songs from the device | | Promotes cognitive development |
| | Sounds designed for the baby | | Compatibility Bluetooth 3.0 & 4.0 |

Technological innovation for the cognitive development of the baby

With the innovative singing buddy and our exclusive eMyBaby® application, the baby will be able to listen and feel its parents' records, the carefully designed preset sounds and the songs from its parents device, thereby promoting the cognitive development of the baby as from its birth until it is 2 years old learning is carried out through the senses.

Close by parents wherever they may be, strengthening bonding

With singing buddy parents can record their voices, songs, or the baby's favourite tales to be played back later, either immediately or at a later time, anywhere, so the baby will always feel like they are close by.

A great source of emotions and sensations for the baby!

The singing buddy module in eMyBaby® has several songs and sounds which have been especially designed for the baby - such as the sound of a heart and maternal womb, sounds from nature, classical pieces, and lullabies.

Infinitive possibilities for music and sounds: can be completely tailored to the parents' taste!

Aside from the predefined recordings and sounds, it is possible to reproduce the music stored on the parents mobile phone (Device music) and to create a list of Favourites, significantly expanding the options.

Anywhere, with or without its accessories

The small size and lightness of the detachable module means that it can be used anywhere and in any situation. It can be used on its own, with a strap with a clip to hook it to a bag or pram, or can even be integrated into the stuffed toy or its two accessories. It works with a long-life rechargeable battery.
